ROOF RAIL SET, CONVERTIBLE TOP WEATHERSTRIP

This roof rail weatherstrip set has been carefully made, trimmed, and packaged into a set. Please immediately check it over for completeness. The set consists of the following six pieces:

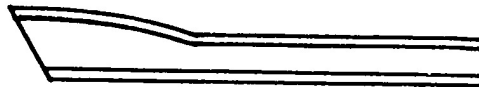

- A) Two strips for the forward section over the door. They are approximately 23" long, with this cross section:

- B) Two sections, molded and trimmed for right and left hand, approximately 20½" overall length, for the center section over the quarter window, with this side view:

- C) Two sections, molded and trimmed for right and left hand, approximately 15½" long overall, for the rear section (folding post), with this side view:

All of these strips should easily fit the metal weatherstrip retainer on your car, but if you do not apply the cloth covering before installing them (some owners do not want the cloth covering), some of them may fit rather loosely. If so, it will help to apply a layer or two of adhesive or friction tape inside on the bottom of the retainer to use up the available space.

To determine right or left hand applications, usually a comparison with the old weatherstrip will tell you which side is which. Occasionally a small amount of additional end-trimming is necessary to get the kind of fit you want. Be very careful with this as the rubber strips should be long enough so that when the top is in place, the ends of the rubber strips meet each other.

For those desiring the cloth covering, our C-27 should be used, as it is the original cotton bowdrill material to which we have applied a high quality double sided adhesive, making it easy to apply.

If the weatherstrips on the windshield posts require replacement, they can be ordered as CV-84.
